

MOHAMMED EBRAHIM

Test Automation Lead | QA Automation Lead | SDET Lead

Chennai, Tamil Nadu, India | +91 8056108042 | mohammed.ebrahim0412@gmail.com

PROFESSIONAL SUMMARY

Test Automation Lead with 8+ years in software testing, web/mobile automation, ETL/data validation, API testing, and QA leadership. Progressed from Manual Test Engineer to ETL Test Automation Engineer to Test Automation Lead within one organization, building automation frameworks from scratch in Python, pytest, Selenium, and Appium, and automating 4,000+ test scenarios across 3 applications. Currently lead an 11-member QA team while staying hands-on with web/mobile automation, work that cut manual testing effort by 80% and has kept releases on schedule with zero major defects reaching production. Certified in Prompt Engineering and RAG, with hands-on experience using Claude Code for AI-assisted automation development.

KEY ACHIEVEMENTS

- Cut manual testing effort by 80% by shifting regression coverage onto automated suites built for long-term reuse.
- Automated 4,000+ test scenarios across 3 applications, spanning web and mobile, using Python, Selenium, Appium, and pytest.
- Delivered releases on schedule with zero major or critical defects reaching production, through better coverage planning and defect triage.
- Brought Claude Code into the team's workflow to speed up converting validated manual test cases into automation suites.
- Lead and mentor an 11-member QA team, running hands-on training sessions on new tools, frameworks, and AI-assisted testing practices.
- Built the team's automation framework from scratch, covering Page Object Model design, parallel execution, and CI/CD integration; it's now the standard the team works from.

TECHNICAL SKILLS

Automation: Python, Selenium, Appium, pytest, Page Object Model, Reusable Components, Framework Design

Execution & Stability: Parallel Execution, Tag-Based Selective Execution, Retry Handling, Explicit Waits

API Testing: Postman, REST API Functional & Negative Testing

Data & ETL: SQL, MySQL, Snowflake, dbt, AWS S3, Source-to-Target Validation

CI/CD & Reporting: Jenkins, Cron Scheduling, Allure, Screenshots/Videos/Logs

Test Data & Config: Excel-Based Test Data, YAML Configuration

AI / GenAI: Claude Code, Prompt Engineering, RAG

Leadership & Process: Team Mentoring, Test Strategy, Agile/Scrum, Sprint Planning, Defect Triage, Release Readiness

CERTIFICATIONS

- Prompt Engineering Certification
- RAG (Retrieval-Augmented Generation) Certification

PROFESSIONAL EXPERIENCE

Codoid Innovations

Jun 2018 – Present

Test Automation Lead

Jan 2022 – Present

- Promoted to Test Automation Lead in Jan 2022; lead and mentor an 11-member QA team, handling technical guidance, task coordination, and quality oversight.
- Built the automation framework the team uses today, and guide its implementation, maintenance, and standards.
- Review test cases, identify automation candidates, support coverage decisions, and contribute to release readiness.

- Collaborate with developers, business analysts, project managers, and stakeholders throughout Agile/Scrum delivery, including sprint planning, estimation, reviews, retrospectives, and defect triage.
- Conduct training sessions to upskill the QA team on new tools, automation frameworks, and AI-assisted testing workflows.

Hands-On Automation — Web & Mobile (Mar 2023 – Present)

- Shifted hands-on technical focus from ETL to Web & Mobile Automation from Mar 2023, while continuing to lead the QA team.
- Currently working hands-on on an OTT web application, balancing QA leadership with automation development.
- Designed and developed a Python/PyTest automation framework from scratch using Selenium and Appium for a FinTech web/mobile application.
- Automated 4,000+ test scenarios across 3 applications covering web and mobile platforms.
- Built the framework around Page Object Model design with reusable web and mobile action components, keeping it maintainable as coverage grew.
- Managed test data through Excel and environment configuration through YAML, keeping both separate from the code itself.
- Added parallel execution and tag-based selective runs to keep large regression suites fast enough to run daily.
- Handled flaky tests with retry logic and explicit waits, improving overall automation stability.
- Set up failure diagnostics using screenshots, videos, and logs, feeding into Allure reports for faster debugging.
- Hooked automation into Jenkins for scheduled daily runs using cron expressions.
- Use Claude Code to speed up automation development, while keeping QA review, validation, and engineering ownership in the loop.
- Work alongside a 4-member engineering team to build and maintain the framework.

ETL Test Automation Engineer

Jan 2019 – Mar 2023

- Designed and ran ETL automation test suites to validate data accuracy, integrity, transformation logic, and migration.
- Used dbt for data transformation and modeling validation.
- Tested ETL processes involving AWS S3 and Snowflake, focusing on data integration and migration.
- Developed SQL queries to validate source-to-target transformations and ensure data accuracy.
- Ran performance and scalability tests, helping identify bottlenecks in the pipeline.
- Wrote functional and negative API test scenarios in Postman, working with developers to validate responses and business logic.
- Collaborated with cross-functional Agile/Scrum teams during sprint planning, reviews, and retrospectives.

Manual Test Engineer

Jun 2018 – Dec 2018

- Started as a Manual Test Engineer testing web and mobile applications.
- Designed and executed functional, regression, smoke, integration, and end-to-end test scenarios.
- Performed requirement analysis, test-case creation, execution, defect reporting, and validation.
- Collaborated with developers, business analysts, and stakeholders across the testing lifecycle.
- Built a strong foundation in software testing before progressing into ETL and automation engineering.

EDUCATION

Bachelor of Technology (B.Tech), Information Technology — Anna University, 2018
